

CASE STUDY

DATA CENTRE DESIGN AND INSTALLATION ACROSS EUROPE AND ASIA FOR GLOBAL SOFTWARE COMPANY

AT A GLANCE

Solution Summary
Data Centre Cabling
Installation

Client
Global software company

Location
Global

BACKGROUND

We were initially appointed by our client, a global software company, in 2017 to undertake a Data Centre (DC) cabling and cabinets installation within the Equinix colocation DC service centre in Slough, UK. We were directed by the client throughout the project and were required to work in strict accordance with its DC specification. This initial project duration was approximately two weeks.

GLOBAL EXPANSION

The client was very particular about how they wanted their 1st DC installed and wanted to make sure that everything was exactly to its high standard. This was achieved by benchmarking works and discussing how things may be improved.

Leveraging unrivalled expertise and leading-edge technology, the client commissioned us to subsequently deliver a further 12 similar projects throughout Europe, Asia and South America. Today we are the software company's preferred DC cabling installation supplier globally.
